

Flueless gas fires and stoves,
100% efficient and
no chimney required

The Lynwood Suite Model 7113 Limestone surround with Astute fire

Burley's range of Flueless gas fires give levels of convenience, efficiency and safety to which flued gas fires can only aspire. There is no requirement for a chimney of any type and with the new surrounds, a beautiful instant fireplace can be created easily and quickly. All flueless fires are 100% efficient, making them A Energy Rated.

The Astute Model 4113 with extruded Outline trim in chrome and black, shown in Lynwood surround

The Astute and Acumen flueless gas fires are designed to fit either into a hole-in-the-wall setting or can be semi-inset when using the custom-made surrounds

Astute 4113
with Silhouette trim
shown in Lynwood surround

No fireplace, no chimney...
no problem.
This beautiful limestone
surround gives the perfect
setting for the Acumen fire,
providing an easy to install
fireplace.

The Watersmeet Suite Model 7111 including Acumen fire without trim

The Acumen Model 4111 with Silhouette trim

Handsome cast stoves with the classic good looks and homeliness of a traditional wood stove but without the inefficiency or mess of a chimney.

Manual or Remote control.

The Esteem Model 4231 log / 4221 coal

The Ambience Model 4121

The Longitude Model 4530 with Satin trim

Latitude 4500 with Orbital trim

The stunning sleek design of the Latitude and Longitude, make a perfect centrepiece for contemporary living areas.

Both models are extremely slim in design which means that they can be fitted on a flat wall without being recessed.

Available with either the Satin, Orbital or Contrast trim. The Satin trim is hand polished making every single one unique.

The Latitude Model 4500 with Contrast trim

Fixed flueless gas fires – how do they work?

Introduction

Many people are confused as to how a flueless gas fire can operate, the easiest thing to do is to compare it to the smallest ring on a gas cooker as they use a similar amount of gas. Unlike a gas ring however, Burley's flueless fires have catalytic converters and monitoring sensors.

Burley introduced fixed flueless gas fires to Britain in 1999. Although the concept is relatively new in this country, fixed flueless gas fires have a long established history in Japan (where there are 40 million), the United States (approximately 20 million) and Australia.

Fixed flueless gas fires give a combination of convenience, efficiency and safety which flued fires can never equal.

Efficiency

Most of the heat from an open flued gas fire or solid fuel fire goes straight up the chimney. By comparison 100% of the heat generated by a flueless gas fire goes to heating the room.

A 2.5kW flueless gas fire (*Burley Environ*), a typical 6kW inset flued gas fire (quoted efficiency 59%), a decorative flued gas fire and a 2kW electric fire were tested in the living room of a typical detached house. The flueless gas fire produced over 3 times more heat per kilowatt than the flued gas fire and over 12 times more heat than the decorative gas fire. In other words the flued gas fire lost over 70% of the heat up the chimney and the decorative fire lost over 90%.

If the 15 million flued gas fires in Britain were replaced by flueless fires, the country would save around 23,500,000,000 kilowatts of gas every year (costing £1,600,000,000) which in turn would reduce carbon dioxide emissions by over 4,200,000 tonnes every year.

Safety

As *Burley's* flueless gas fires do not rely on a chimney, they provide an unsurpassed level of safety to which flued fires can only aspire. Flues and chimneys can become blocked or adversely affected by down-draughts. *Burley* flueless gas fires are designed to burn the gas extremely cleanly without a flue. The burnt gases are then passed through a catalytic converter.

Every *Burley* flueless gas fire has an oxygen depletion sensor which constantly monitors the air quality in the room. If the level of oxygen drops by just 1.5%, the fire automatically shuts down.

To prevent rubbish being thrown onto the fire and to ensure absolute clean burning, *Burley* fit a ceramic glass front to every fire.

Burley's production method is unique. Every flueless gas fire we have ever made has been bench run for 30 minutes, during which time we monitor numerous combustion and safety criteria. *Burley's* rigid test criteria for combustion are four times stricter than the European standards.

Movement of air through a house with a flueless fire

Movement of air through a house with a chimney

Air movement

Flueless fires gently distribute heat throughout the entire house. A small air vent regulates air into the room which is being heated. This heated air dissipates away from the fire and circulates around the house.

A chimney or flued fire, by comparison, extracts all the air in your room once every hour, 24 hours a day, 365 days a year. This is a huge amount of warm air (that you have paid to heat) which is replaced by cold air leaking in through windows and doors.

Catalytic converters

All *Burley* flueless gas fires incorporate a catalytic converter. This is a honeycomb which is coated with rare metals. Oxygen 'sticks' to the coating. If a carbon monoxide molecule meets it, the oxygen converts the carbon monoxide to carbon dioxide (which is harmless and is present in fresh air). *Burley* has NEVER had a catalytic converter fail or need replacing.

All *Burley* appliances are CE marked by international test houses. One of the tests that the fires must pass is to have the catalytic converter removed. In this condition it must still pass all the strict combustion tests.

Convenience

A flueless gas fire can be fitted in minutes rather than several hours, it is an extremely simple and problem free operation. If it is to go in an open chimney, then the flue must be blocked. Apart from that the fire just needs connecting and testing, and the air vent fitting. When fitting a flueless fire, it does not need to be sealed to the fireplace opening.

Flueless gas fires do not have to be installed on an outside wall. As no flue is required, thousands of pounds can be saved by not building a new chimney or restoring a condemned one.

Annual servicing for a flueless fire simply consists of cleaning the fire, checking the combustion, and checking for damaged components.

As with all gas appliances fittings must only be carried out by a Gas Safe registered person.

No problems with chimneys

Chimneys and flues are fraught with potential problems, all of which will stop a flued fire from operating safely.

1. The fabric of the chimney could collapse.
2. A nest or debris could block the flue.
3. Atmospheric conditions or open doors can create a down draught.
4. Extractor fans can create a draught to reverse the pull of a chimney, causing it to spill the products of combustion into the room (this makes flueless gas fires particularly popular and safe for use in pubs and restaurants).

Burley's flueless gas fires suffer from none of these problems.

Solid castings made in the Black Country, are hand polished to create a distressed antique chrome finish, or enamelled in black.

All models are available with a choice of coal or pebble fuel bed and manual, slide, or total remote control.

The Langton Model 4892CH with antique chrome frame and front

Control options

Manual control

The manual control incorporates an integral ignition. Any flame height between high and low may be selected.

Total control

This option provides total control of your appliance by igniting the pilot and operating the fire by remote control. The fire can also be operated manually.

Slide control

Light, regulate, and turn off your gas fire from one easy to operate high level control.

Langton Model 4894CH with antique chrome frame and black front

A black frame and black front option is also available (Model 4894BL)

Manual control valve

The Environ Model 4240BR with brass frame and front

New

The Environ and Perception are now available with a high level slide control option, simple easy to reach operation.

4242 / 4242-R / 4242-S

This established best seller offers one contemporary and four traditional models, all of which combine fine styling with 100% efficiency. The Foxton, Langton, Environ and Perception will freestand against a flat wall or inset into a standard fireplace opening.

The Environ

4247 / 4247-R / 4247-S

4240 / 4240-R / 4240-S

4248 / 4248-R / 4248-S

4244 / 4244-R / 4244-S

The Shearsby Model 4887BL with Harmony fascia in black and brushed steel

All models are available with a choice of coal or pebble fuel bed, manual, slide, or total remote control.

Model 4880BL, black and brass trim

Model 4887GU, gunmetal and brushed steel trim

The Harringworth Model 4874 with black Ioss trim

Made in The United Kingdom

Burley are very proud to not only manufacture all our products in the UK, but to support British industry by buying as many of our components and materials as locally as possible.

We believe the public should be given total transparency so they can decide for themselves if they wish to support countries with poor environmental and human rights policies.

Inset dimensions

Energy Rating

All models in this brochure are rated A, the highest of any gas fires. See website for details.

Gas Safe Registered Fitter

All gas appliances must be installed and serviced annually by a Gas Safe registered (formerly Corgi) fitter in accordance with the installation instructions.

Full instructions are supplied with the fire and on our website. Please read installation instructions before undertaking any structural preparation work. For more information and installation guide, visit www.burley.co.uk/technical_information.php

Ventilation

As per Building Regulations Part J, an air vent which provides not less than 100cm² free air must be installed in the room, at least 1 metre away from the fire. A chimney, ceiling or floor vent is not suitable.

Central heating

Flueless fires are not designed to be the sole source of heat in a room. They are supplementary to central heating.

Existing chimney or flue

Existing chimneys and flues must be blocked off. A cavity wall box is supplied with the Perception, Environ, Langton, Foxton, Harringworth and Shearsby. We recommend that this is used in all cases.

Fireplace requirements

The fireplace and all materials within 200mm of the appliance must be non-combustible. All materials, including the fireplace and wall above (including any varnishes, paints etc) must be rated to withstand a constant working temperature of 150°C. You cannot put televisions etc on the wall above the fire.

Gas fires may not be fitted in basements which do not have at least one side open to the outdoors, or in bathrooms. If in doubt, please call Burley service department for more advice.

Natural gas or Propane

Please specify natural gas or propane when placing your order as the fires are single category appliances. Due to the properties of propane the flame picture may differ slightly.

Guarantee

All products come with a one-year guarantee. Return of the guarantee card and service during the first year of ownership will provide you with a free second-year guarantee (conditions apply).

Because our policy is one of constant development, details may vary from those given in this publication. Images remain copyright of Burley and may not be reproduced without the permission of Burley's Marketing Department.
